ABSTRACT

The Comprehensive Tests of Basic Skills (CTBS), Form U were administered to all students in Grades 5, 7, and 9 in the San Diego City Schools during the last two weeks of April, 1983. This report is intended to respond to two primary questions: (1) how are San Diego elementary and junior high students doing relative to the national norm group, and (2) how does districtwide CTBS achievement for Spring 1983 compare to the previous year? Most district median percentile values were at or above the 50th percentile. Twenty of the thirty subtests had medians above the 50th percentile, another nine subtests had medians which equaled or closely approximated the national norm, and only one subtest had a median well below average (Grade 9 Spelling, 46th percentile). The Math Computation subtest scores for Grades 5, 7 and 9 were consistently exceptionally high--with nearly two-thirds of the students scoring at or above the national average. Compared with Spring 1982 results, 1983 median percentile scores have increased or remained stable in 19 of 20 instances. Only the Grade 5 Reading Comprehension median percentile value declined. Language subtests demonstrated very substantial gains in both Grades 5 and 7. (Author/BW)

SUMMARY

SAN DIEGO CITY SCHOOLS DISTRICTWIDE TESTING PROGRAM RESULTS

SPRING 1983

The nationally standardized *Comprehensive Tests of Basic Skills* (CTBS), Form U were administered districtwide to all students participating in the regular school program in Grades 5, 7 and 9 during the last two weeks of April, 1983. Senior high students at Grade 11 will be tested districtwide in November. Additional tests were administered districtwide in Grades 3, 6 and 12 as a part of the *California Assessment Program* (CAP). CAP results will be reported in November when the State Department of Education publicly releases the test data.

This report is directed to the Districtwide Testing Program at the elementary level (Grade 5) and junior high school level (Grade 7 and 9). This report is intended to respond to two primary questions. They are:

- How are San Diego elementary and junior high students doing relative to the national norm group?
- How does districtwide CTBS achievement for Spring 1983 compare to previous years?

DISTRICTWIDE TEST RESULTS, SPRING 1983

Based on the new norms for the CTBS, Form U tests, most district median percentile values were at or above the national average (50th percentile). Twenty of the thirty subtests had medians above the 50th percentile, another nine subtests had medians which equaled or closely approximated the national norm, and only one subtest had a median well below average (Grade 9 Spelling, 46th percentile). The Math Computation subtest scores for Grades 5, 7 and 9 were consistently exceptionally high -- with nearly two-thirds of the students scoring at or above the national average.

HISTORICAL PERSPECTIVE OF CTBS, FORM U DATA

Since this is only the second year that the new form of the CTBS has been administered at Grades 5 and 7, the "historical perspective" is simply a data contrast of Spring 1983 with Spring 1982. Compared with Spring 1982 results, 1983 median percentile scores have increased or remained stable in 19 of 20 instances. Only the Grade 5 Reading Comprehension median percentile value declined. Language subtests demonstrated very substantial gains in both Grades 5 and 7.

Appendices A, B and C contain median percentile scores by subtest for Grades 5, 7 and 9, respectively, for each elementary and junior high school in the district.

The other appendices of this report provide concept cluster analysis information (Appendices D, E and F), test data from the districtwide testing program which contrasts achievement of the court identified minority-isolated schools and the other schools in the district (Appendix G), and historical displays of districtwide achievement prior to the conversion to CTBS, Form U (Appendix H).

SAN DIEGO CITY SCHOOLS
DISTRICTWIDE TESTING RESULTS
BY DISTRICT AND BY SCHOOL
SPRING 1983

INTRODUCTION

It is the intent of this report to provide a brief, but detailed summary of standardized norm-referenced achievement tests results. The information contained herein summarizes results for elementary and junior high school districtwide testing (Grades 5, 7 and 9). Districtwide tests for senior high schools (Grade 11) are annually administered in November and are reported in the Spring. The State mandated tests, California Assessment Program (CAP), which were administered during the 1982-83 school year will be reported to the Board in early November. Other norm-referenced testing occurs in schools in the San Diego Unified District as a part of the evaluation of externally-funded projects (e.g., ESEA Chapter I), and a summary of such results may be found in other documents.* In addition, individual school sites may choose to administer selected norm-referenced tests to assist teachers in their assessment of student achievement. This report covers only districtwide testing for Grades 5, 7 and 9.

The tests administered by the California Assessment Program and the Districtwide Testing Program are intended to measure achievement in the "basic skills." Achievement in many other curriculum content areas which are indicative of the quality of education in schools is not measured by these tests.

This report is directed to the Districtwide Testing Program at Grades 5, 7 and 9 and is intended to respond to two primary questions. They are:

- How are San Diego elementary and junior high students doing relative to the national norm group?
- How does districtwide CTBS achievement for Spring 1983 compare to previous years?

UTILIZING DISTRICTWIDE TEST RESULTS

The test results obtained from the Districtwide Testing Program are intended to be utilized by a variety of audiences and for varied purposes. The primary audiences and purposes are to:

1. Provide the Superintendent and the Board of Education a general assessment of the level of standardized test achievement in the basic skills.
2. Provide principals an assessment of their schools' achievement in the basic skills -- revealing relative strengths and weaknesses for further study and analysis.
3. Provide teachers an assessment of individual pupil's achievement in the basic skills areas -- to aid in the improvement of instruction through further diagnosis and/or counseling with pupils and parents relative to classroom achievement, attitudes, work habits, etc.

*Consolidated Application: Final Evaluation Reports, 1982-83

Districtwide Testing Results
by District and by School
Spring 1983

4. Provide counselors achievement test results -- to use in conjunction with classroom achievement, teacher recommendations, and other information for placement in advanced or remedial classes; and as additional information in guidance and counseling with pupils relative to programming needs and educational planning.
5. Provide the Educational Services Division personnel appropriate information and Concept Cluster Analyses -- to aid in strengthening relatively weaker areas in the basic skills areas districtwide; and to aid resource personnel in working with teachers and schools within the district.
6. Provide required testing information to the State Department of Education -- to aid in the evaluation of externally-funded state and federal programs.
7. Provide achievement test results to students and their parents -- to permit and encourage an awareness of students' academic progress.

In addition to the above utilization of Districtwide Testing Program data, the California Assessment Program (CAP), the current state assessment program, directs its focus to broad program evaluation (rather than the assessment of individual pupil performance). The state assessment program is designed to identify basic skills strengths and weaknesses by examining group data rather than individual performance.

The tests data provided by these two testing programs, Districtwide Testing Program and CAP, complement each other; thereby providing a thorough assessment of elementary and secondary schools programs and student achievement with, hopefully, a minimal erosion of instructional time.

CONTENT AREAS MEASURED AND TESTING DATES

During the school year, state and nationally standardized tests were administered to nearly 60,000 San Diego students in Grades 3, 5, 6, 7, 9, 11 and 12 to obtain data for the two testing programs. The types of tests and the testing periods are as follows:

California Assessment Program (results to be reported in November)

Survey of Basic Skills: Grade 3 administered in late April and early May covering content areas of Reading, Written Language, and Mathematics.

Survey of Basic Skills: Grade 6 administered in April, covering content areas of Reading, Written Language, and Mathematics.

Survey of Basic Skills: Grade 12 administered in December covering areas of Reading, Written Expression, Spelling, and Mathematics.

Although the grade levels tested by the California Assessment Program have not changed since its inception in 1975, the tests at Grades 3 and 6 have changed recently. The changes will be described more fully in the November report which will contain CAP data. Also, in the Spring of 1984, a new Grade 8 CAP test will be administered at the junior high level.

Districtwide Testing Results
by District and by School
Spring 1983

Districtwide Testing Program

Comprehensive Tests of Basic Skills, Level G, Form U, administered to Grade 5 students in April, covering curriculum areas of Reading, Language, and Mathematics.

Comprehensive Tests of Basic Skills, Level H, Form U, administered to Grade 7 students in April, covering curriculum areas of Reading, Language, and Mathematics.

Comprehensive Tests of Basic Skills, Level J, Form U, administered to Grade 9 students in April, covering curriculum areas of Reading, Language, and Mathematics.

Comprehensive Tests of Basic Skills, Level K, Form U, will be administered to Grade 11 students in November, covering curriculum areas of Reading, Language, and Mathematics. Results will be reported in the early Spring.

The *Comprehensive Tests of Basic Skills*, Form U was administered in the Districtwide Testing Program (as well as externally-funded projects testing, K-8) during the spring of 1982 for the first time. As was reported to the Board of Education in public session on June 1, 1982, the Form U norms are described by the test publisher as being "harder" than Form S norms. The point was made that the comparability of normed data from one test to the next is essential when analyzing historical achievement levels.

This spring students were tested districtwide at Grade 9 for the first time. These students, (as well as students in Grades K-12, for externally-funded projects), are now administered the new CTBS, Form U tests. The extension of districtwide testing to Grade 9 was a result of a court order by Judge Franklin B. Orfield. In part, the intent of the order was to provide test data to contrast the achievement levels of pupils in the minority-isolated schools with the achievement of pupils in the other schools within the district. Appendix G of this report contains pages from the report provided to the court.

In the "test results" section of this report which follows, the historical data addresses only Form U results. Hence, Grade 9 information has no previous year's data. Also, Grades 5 and 7 Form U data are provided for only Spring 1982 and Spring 1983. Appendix H contains displays of districtwide achievement at elementary and junior high school levels from 1975 to 1982 (when CTBS, Form S was used).

Districtwide Testing Results
by District and by School
Spring 1983

NUMBER OF PUPILS TESTED

The number of pupils enrolled, the number tested, and the number of pupils exempted (non-English-speaking or not participating in the regular school program) are provided in Table 1. The percent of students tested are also provided.

TABLE 1
Number of Students Tested in Districtwide Testing Program
Grades 5, 7 and 9
Spring 1983

Grade Level	Number of Pupils Enrolled	Number Tested	Percent Tested	Number Exempted or Absent
5	7,992	7,190	90.0	802
7	8,821	8,173	92.7	648
9	7,789	7,275	93.4	514

DISTRICTWIDE TESTING PROGRAM -- CTBS RESULTS

Elementary and Junior High CTBS Data -- Spring 1983

This section is intended to respond to the question, "How are San Diego elementary and junior high students doing relative to the national norm group?"

In this section, test data are reported which compare San Diego students' achievement to the national norm group achievement at three key points in their respective distributions (25th, 50th and 75th percentiles--defined below).

The grid structure for Figures 1, 2, and 3 represent achievement for the national standardization norm group for CTBS, Form U. Percentile rank scores are shown at the top of the figures. The percentile rank "50" represents the norm group's average achievement. The score achieved by the average, or the middle pupil when scores are ranked from high to low, is assigned a percentile rank of 50. One-half of the pupils in the standardization group achieved scores above this point, and one-half achieved scores below this point.

In addition to the 50th percentile, or median score, two other key percentiles are indicated by the vertical-dashed lines, the 25th and 75th percentiles. The 25th percentile is the score below which 25 percent of the norm group's pupils scored; while the 75th percentile is the point below which 75 percent of the pupils scored.

Districtwide Testing Results
by District and by School
Spring 1983

In Figures 1, 2 and 3, superimposed on the national grid, are horizontal bars (with numerical values at each end and in the middle) which represent San Diego City Schools' achievement relative to national achievement. The numerical value to the right end of each bar represents the Q3 point (or 75th percentile) of the district's distribution of scores. Similarly, the Q₁ (25th percentile) and median (50th percentile) values for the district distribution are displayed on the left and middle, respectively, of each bar.

If the district's achievement were the same as the national norm group, the right end of a bar would be on the right vertically-dashed line (75th percentile) of the grid; the middle value in the bar would coincide with the grid's 50th percentile dashed line; and the left of the bar would be on the 25th percentile national dashed line. Higher San Diego achievement would place the bar to the right of the respective lines of the grid; lower district achievement would place the bar to the left of the respective lines of the grid.

Grade 5 Results

Figure 1 contains a graphic summary of Grade 5 CTBS results for Spring 1983. A few noteworthy observations regarding the data are:

- The median percentile values for three of the ten subtests exceeded the Form U national norm (the publisher's 50th percentile); while the medians for the other subtests closely approximated the norm (scores of 48 and higher).
- The subtests with the highest median score were Math Computation and Total Math--both having a median percentile of 60 or higher. (This means that the student in the middle of the district's distribution for each of the above mentioned subtests scored higher than 60 percent of the students in the publisher's norm group.)
- The subtests with the lowest score were Spelling and Language Mechanics each with a median percentile of 48. Language Mechanics scores were lower than the norm population for the Q₁, median, and Q₃ students (24, 48 and 69, respectively).
- The quartile scores for the Math Computation subtest were the most impressive (Q₁ = 39th percentile, Median = 64th percentile, and Q₃ = 83rd percentile).
- Data in the column to the right of the graphics indicate the percent of students scoring at or above the publisher's 50th percentile value. Four subtests had more than 50 percent above the Form U norm. The other subtests approached 50 percent. For Total Reading, Total Language and Total Math the percents are 48.2, 49.6 and 62.6 respectively.

Median percentile values for each subtest are provided for each elementary school in Appendix A.

Districtwide Testing Results
by District and by School
Spring 1983

Grade 7 Results

Figure 2 displays a graphic summary of Grade 7 CTBS results for Spring testing. A few noteworthy observations regarding the Grade 7 data which are provided in the figure are:

- The median values for all ten subtests exceeded the publisher's 50th percentile. Nearly all subtests had Q_1 and Q_3 values which likewise exceeded their respective normative standards (25th and 75th percentiles) -- the only exception was Reading Vocabulary's Q_2 value equaled 75.
- The subtests with the highest median scores were Language Expression, Math Computation, Math Concepts and Applications, and Total Mathematics-- all having a median percentile of at least 64. (This means that the student in the middle of the district's distribution for each of the above-mentioned subtests scored higher than at least 64 percent of the students in the publisher's norm group.)
- The quartile scores for the Math Computation subtest were the most impressive (Q_1 = 45th percentile, Median = 70th percentile, and Q_3 = 88 percentile).
- The Reading Vocabulary subtest had the lowest quartile scores (28, 52, 75). Each of these values equals or exceeds the corresponding national standard for Form U.
- Data in the column to the right of the graphics indicate that more than 50 percent of the students scored at or above the national average for all subtests. For Total Mathematics, 68.8 percent of the students were at or above the publisher's Form U norm, 54.1 percent for Total Reading, and 60.4 percent for Total Language. Nearly three-quarters of San Diego's Grade 7 pupils are computing at or above the national norm according to the Math Computation subtest's value (73 percent).

Median percentile values for each subtest are provided for each junior high school in Appendix B.

Grade 9 Results

Noteworthy observations from Grade 9 data in Figure 3 follow:

- The median percentile values for seven of the ten subtests exceeded the publisher's median value; two others met or closely approximated the norm; one was below norm (Spelling, 46th percentile).
- For the most part, the quartile and median values for Grade 9 San Diego students were very similar to the national group. The noteworthy exceptions were Math Computation and Total Mathematics. The scores for both of these subtests were well above the corresponding national values (e.g., Math Computation; Q_1 = 42, Q_2 = 67 and Q_3 = 85).

Districtwide Testing Results
by District and by School
Spring 1983

- The Q_1 and median values for Spelling (21 and 46, respectively) place that subtest as the lowest content area for Grade 9 pupils.
- The values contained in the column to the far right of Figure 3 indicate that more than half of the Grade 9 students scored at or above the publisher's 50th percentile in Total Reading (50.6 percent), Total Language (53.5 percent) and Total Mathematics (62.8 percent). Only the subtests of Reading Vocabulary and Spelling did not reach the 50 percent standard (49.4 percent for Vocabulary, and 49.0 for Spelling). Nearly two-thirds of the students, 67.4 percent, scored at or above norm on the Mathematics Computation subtest.

Individual school median values by subtest may be found in Appendix C.

In summary of districtwide CTBS achievement for Spring, 1983, most values were above the national average of the 50th percentile (i.e., 20 of 30 subtests median values). Nine of the ten remaining subtests had median scores which closely approximated the national norm. The only subtest which scored substantially lower than norm was Spelling at Grade 9 with a median value of the 46th percentile. The Mathematics Computation subtest's scores were consistently exceptionally high across the three grade levels tested (nearly two-thirds of the students scoring at or above norm).

The next section provides a limited historical perspective on how these scores compare to previous achievement on Form U of the *Comprehensive Tests of Basic Skills*. This narrative continues on Page 11.

by District and by School
Spring 1983

Elementary and Junior High CTBS Data -- 1982 vs. 1983

In attempting to answer the question, "How does districtwide CTBS achievement for Spring 1983 compare to previous years?", the response will be necessarily brief. Since this is the first year for Grade 9 testing districtwide, and only the second administration of CTBS, Form U for Grades 5 and 7, the historical comparison is reduced to a contrast of 1982 and 1983 data.

Table 2 and Figure 4 summarize the relevant information. In Table 2, the median percentiles are provided for each subtest for each grade tested. For Grades 5 and 7, the "change" in median percentile scores from 1982 to 1983 are also included. Figure 4 contains graphic illustrations of the data in Table 4. Grade 9 data are displayed in Figure 4 -- even though there is no historical contrast -- to provide a multi-grade perspective of achievement in Reading, Language and Mathematics.

Noteworthy conclusions regarding the data in Table 2 and Figure 4 follow:

- The most pronounced changes are in Language subtest scores -- especially Language Mechanics. Grade 5 students in 1983 scored nine percentile points higher than their grade-level counterparts in 1982 (48 vs. 39). Similarly, Grade 7 Language Mechanics increased nine points (55 vs 46). The impact of the Language subtests' gain are illustrated in Figure 4 (see "Total Language" cell).
- Of the 20 subtests at Grades 5 and 7 which have 1982 and 1983 scores, eleven instances have higher median percentile scores, eight have unchanged scores, and one has lower scores. The one decline is Reading Comprehension at Grade 5 (from 52nd to 49th percentile).
- Grade 7 Mathematics scores which were already exceptionally high improved in 1983. (See Figure 4, Total Mathematics for Grade 7.)

In summary of the historical contrast of 1983 CTBS data with 1982, scores have increased or remained stable in 19 of 20 instances. Only Grade 5 Reading Comprehension scores declined. Language subtests demonstrated very substantial gains in both Grades 5 and 7.

In conclusion, scores of students tested districtwide in Grades 5, 7 and 9 on the relatively new CTBS, Form U are generally at or above the publisher's national norm group. Scores have generally improved in Grades 5 and 7 since Spring 1983.

APPENDIX H

HISTORICAL DISPLAY OF CTBS DATA, 1975-1982

FROM REPORT 330: *DISTRICTWIDE TESTING RESULTS*

BY DISTRICT AND BY SCHOOL GRADES 5 AND 7

SPRING 1982

FIGURE 1

HISTORICAL DISPLAY OF CTBS DISTRICTWIDE TESTING RESULTS
ELEMENTARY SCHOOL TESTING 1975-1982
MEDIAN PERCENTILE RANKS

The values plotted represent the interpolated percentile ranks of the calculated median raw (or scale) scores. Data for 1975 through 1978 are for students tested as sixth graders (Fall), 1980 through 1982 data are for Grade 5 students (Spring), and 1979 data represent a statistical combination of Spring and Fall data (for Reading and Math).

Students were tested using CTBS, Form S from 1975 through 1981. In Spring 1982, students were administered Form U.

For 1982 results, the "Ⓢ" symbol represents the median percentile rank using Form U norms. In each of the graphs above, the additional dot (●) represents the corresponding values equated to the Form S norms using the publisher's equating study. This provides data which are comparable to the 1975 through 1981 Form S values.

FIGURE 2

HISTORICAL DISPLAY OF CTBS DISTRICTWIDE TESTING RESULTS
JUNIOR HIGH SCHOOL TESTING 1975-1982
MEDIAN PERCENTILE RANKS

The values plotted represent the interpolated percentile ranks of the calculated median raw (or scale) scores. Data for 1975 through 1981 are for students tested as eighth graders (Fall) and 1982 data are for Grade 7 students (Spring).

Students were tested using CTBS, Form S from 1975 through 1981. In Spring 1982, students were administered Form U. 86

85 For 1982 results, the "Ⓢ" symbol represents the median percentile rank using Form U norms. In each of the graphs above, the additional dot (●) represents the corresponding values equated to the Form S norms using the publisher's equating study. This provides data which are comparable to the 1975 through 1981 Form S values.
